

ENTREPRENEURSHIP DEVELOPMENT AND STARTUPS (5TH SEMESTER)

DIPLOMA WALLAH NAME TO SUNA HI HOGA

■ UNIT 2 - OPPORTUNITY IDENTIFICATION & IDEATION

(Weeks 3-4)

📅 WEEK 3 - Finding Your Big Idea: Problem-Solving Approach

◆ 1. Sources of Entrepreneurial Opportunities

Entrepreneurship begins with identifying a **problem or opportunity** in society.

Opportunities are ideas that can be turned into a business that helps people and earns profit.

(Entrepreneur banne ka pehla step hai logon ki problem samajhna aur uska solution dhoondhna.)

Let's understand the **five main sources** of entrepreneurial opportunities:

(a) Pain Points

“Pain points” mean **problems people face in their daily lives**. Every business idea begins when you see someone struggling and think, *“Can I make this easier for them?”*

Example:

In rural Jharkhand, many people still depend on hand pumps for water. A student startup “JalSaathi” created low-cost portable water purifiers for villages — solving a real pain point.

In short:

When you solve someone's problem → you create a business opportunity.

(Jab tum kisi ki problem solve karte ho, wahi tumhara business ban sakta hai.)

(b) Market Gaps

A “market gap” means **something missing in the market** that people want.

Sometimes, a product or service is not available, or it's available but not in a good way.

Example:

In Ranchi, college students wanted healthy but affordable tiffin. No one was offering that — so a startup “Tiffin Dost” began providing healthy lunch at ₹40 per meal.

Key Point:

Spotting what is missing in your surroundings is the easiest way to start a business.

(Jo market mai nahi mil raha hai, usi ka solution tum bana sakte ho.)

(c) Trends

“Trends” are the **changing patterns in society or technology**.

A smart entrepreneur always watches what people are starting to like or demand.

Example:

Now everyone is shifting towards electric vehicles (EVs). Starting small EV charging stations in cities like Dhanbad or Hazaribagh can be a great future startup.

Key Point:

When you follow trends early, you become a leader, not a follower.

(Trend samajhne wala hamesha market mai aage rehta hai.)

(d) Technological Advancements

Technology brings new tools that can make life easier or faster.

Entrepreneurs who use technology creatively can make powerful solutions.

Example:

Drones are used for photography — but in Jharkhand, drones can also deliver medicines in remote villages.

This idea combines innovation + social benefit.

Key Point:

Technology se life aasaan banao, log tumhara idea zarur pasand karenge.

(e) Personal Hobbies and Skills

Many successful startups begin from a person's **passion or hobby**.

If you're good at something and enjoy it — that can become your business.

Example:

A student from Jamshedpur who loved photography started taking local event photos and later built a small photography business called "ClickPoint Studio".

Formula:

👉 **Passion + Skill + Problem = Great Startup Idea**
(Jis cheez ka shauk ho, use business mai badlo.)

♦ 2. Design Thinking Principles for Problem Identification

Design Thinking is a creative process used to understand problems deeply and build smart solutions.

(Design Thinking ek sochne ka tareeka hai jisse hum problem ko samajhke innovative solution banate hain.)

It has **5 stages**:

1. **Empathize** – Understand the user’s feelings, experiences, and challenges.
Example: Talk to local shopkeepers about their daily problems.
2. **Define** – Write down the main problem clearly.
Example: “Small shopkeepers in Ranchi don’t have digital payment options.”
3. **Ideate** – Think of creative solutions.
Example: Create a low-cost QR-based payment app.
4. **Prototype** – Build a small working model.
Example: Make a demo version of the app for a few shops.
5. **Test** – Try it out and collect feedback.
Example: See if 10 shopkeepers find it easy to use.

Key Point:

Design Thinking turns vague ideas into real-world solutions through creativity and testing.

(Yeh process tumhe step-by-step sochna sikhata hai jaise ek innovator.)

◆ **3. Techniques for Understanding Customer Needs (Empathy Mapping)**

Empathy Mapping means **thinking from the customer’s point of view**.

(Customer ke nazariye se sochna.)

It helps in understanding what customers truly **say, think, do, and feel**.

Step	Description	Example
Say	What customers say about their needs	“Vegetables are too costly here.”
Think	What they think but may not say	“I wish there was a cheaper way to buy fresh vegetables.”

Do	What actions they take	They travel far to buy fresh vegetables.
Feel	What emotions they experience	Frustration, stress, or disappointment.

Example:

By observing people in Hazaribagh markets, a student realized buyers struggle to find fresh vegetables daily.

He built a small app that connects farmers directly to customers.

Key Point:

Empathy helps you see what customers really want, not just what they say.

(Customers ke dil aur dimaag dono samajhna hi empathy hai.)

◆ 4. Activity: Field Observation Exercise

Activity:

Go outside your classroom — to your **campus, market, or village** — and write down **3 real problems** you notice.

For example:

1. Lack of dustbins in public areas.
2. Students wasting food in canteen.
3. Difficulty finding bike parking.

Then, brainstorm how you could solve each problem.

(Yeh practice tumhe real entrepreneur banati hai.)

WEEK 4 – Ideation & Validation Techniques

◆ 1. Brainstorming Methods

Brainstorming means **thinking together in groups to generate ideas freely.**

(Team ke saath milke naye ideas sochna bina judge kiye.)

The SCAMPER Technique:

It's a creative thinking method that helps modify existing ideas into new ones.

Letter	Full Form	Meaning	Example (Jharkhand context)
S	Substitute	Replace one element with another	Replace plastic packaging with leaf plates.
C	Combine	Merge two ideas	Combine coaching center + café = "Study Café".
A	Adapt	Adjust old idea to new use	Adapt solar lamps for remote villages.
M	Modify	Change size or shape	Modify normal cycles into e-bikes.
P	Put to Another Use	Use product differently	Use waste tyres to make playground swings.
E	Eliminate	Remove unnecessary parts	Eliminate middlemen from farmer product sales.
R	Reverse / Rearrange	Change order or process	Online theory first, then practical offline.

Key Point:

SCAMPER turns simple ideas into innovative ones.
(Chhoti soch ko bada idea banane ka tool hai.)

◆ **2. Concept Generation and Prototyping**

After brainstorming, you must **create a visual or working model** of your idea — this is called a **prototype**.
(Prototype ek chhota demo hota hai jo dikhata hai idea kaise kaam karega.)

Example:

During COVID, a team of students made an automatic hand-sanitizer dispenser using waste bottles and sensors. It was simple but effective — that's a perfect prototype.

Why Prototype?

- Helps visualize your idea.
 - Easy to explain to investors or teachers.
 - Helps test what works and what doesn't.
-

◆ **3. Minimum Viable Product (MVP)**

An MVP is the **simplest working version** of your product that solves the problem and can be tested quickly.
(Itna simple version jo kaam kare aur log use kar sake.)

Example:

Before building a full app, a WhatsApp group can be used to manage tiffin orders — that's an MVP.

Benefits of MVP:

1. Saves time and money.
2. Gives real feedback.
3. Helps improve before big launch.
4. Avoids failure risk.

5. Builds confidence.

◆ 4. Initial Idea Validation

Validation means **checking if your idea is useful and people are ready to use it.**

(Matlab idea ka real test karna.)

Methods:

- Conduct small **surveys** among your target customers.
- Take **interviews** or **feedback**.
- Discuss with **mentors, teachers, or shop owners**.

Example:

Before starting a “College Ride Share App,” students asked 50 classmates:

“Would you share rides if it saves ₹10?” — 80% said yes → Idea validated!

◆ 5. Activity: Group Ideation Session

Steps:

1. Make a group of 3–5 students.
2. Choose a local problem (e.g., canteen waste).
3. Brainstorm ideas using SCAMPER.
4. Select one solution.
5. Create a basic MVP (poster, demo, or video).

Example:

Problem – Food waste in hostel mess.

Solution – A food donation network for nearby orphanages.

🌟 Summary Table

Topic	Key Learning
-------	--------------

Sources of Opportunities	Pain points, gaps, trends, technology, hobbies
Design Thinking	A 5-step creative approach to problem-solving
Empathy Mapping	Understanding user needs deeply
Brainstorming (SCAMPER)	Generating creative ideas
Prototyping	Building a simple model to test ideas
MVP	Basic working version for feedback
Validation	Confirming real demand before starting

Jharkhand Real-Life Example

Startup Name: *Tribal Tastes*

Idea: Selling traditional snacks like “Mahua Ladoo” and “Litti-Chokha” online.

Opportunity: People outside Jharkhand can’t easily get these authentic tribal snacks.

Process:

- Observed demand → (Pain Point)
- Created Instagram store → (Prototype/MVP)
- Collected feedback and improved packaging → (Validation)
Now, it’s a known local brand promoting Jharkhand culture.
